
Auxiliaries in Health Care

Programs in Developing Countries

N. R. E. Fendall

Despite outside aid, health care operations in emerging nations remain handicapped by meager financing, a paucity of trained personnel, and high rates of morbidity, malnutrition, and child mortality. Physicians alone cannot meet the health care needs of these people. Professor Fendall describes the variety of roles for which auxiliaries may be trained to meet the demand for improved health programs. **\$9.00**

HEALTH AND DISEASE IN CHAD

Epidemiology, Culture, and Environment in Five Villages

Alfred A. Buck, Robert I. Anderson, Tom T. Sasaki, and Kazuyoshi Kawata “. . . a very worthwhile contribution to the better understanding of health and disease in Chad in particular and in all developing countries in general.”
—*American Journal of Tropical Medicine and Hygiene* **\$9.50**

HEALTH MANPOWER IN PERU

A Case Study in Planning

Thomas L. Hall “. . . lucid and well organized. . . . After presenting as complete a picture of 1964 conditions that official and special census data permit, he projects health manpower demand and supply to 1984.”—*Choice* **\$7.50**

HEALTH AND DISEASE IN FOUR PERUVIAN VILLAGES

Contrasts in Epidemiology

Alfred A. Buck, Tom T. Sasaki, and Robert I. Anderson “This is an excellent report on the types of epidemiological investigations that are possible where there are few health resources, scant knowledge of communicable and other diseases, and even less information concerning the factors associated with their prevalence.”—*Canadian Medical Association Journal* **\$5.00**
