Supplementary figure 1

Panel A and B show histograms of TNF (pg/ml) levels in response to various treatments. The x-axis represents different concentrations of Atorvastatin (µM) and Vehicle (µM) with additional treatments such as pfGPI (100nM) and Mevalonate (200µM). The y-axis represents TNF levels ranging from 0 to 3000 pg/ml.

Panel C and D depict similar data but with different treatments, such as Pam3CSK4 (50ng/ml) and LPS (5ng/ml) in addition to Atorvastatin, Vehicle, and Mevalonate.

Significance is indicated by asterisks (*) and ***, with ** and *** indicating statistical significance at p < 0.05 and p < 0.001, respectively.
