Figure 1. Flow diagram of study communities.

Screened for the MORDOR trial
n = 732 communities

Included in the MORDOR trial
n = 615 communities

Excluded
- Ineligible
  n = 86 communities
  Enrolled in other studies
  n = 30 communities

Completed reference standard (5 years of population-based census)
n = 594 communities
Mean 293 ± 198 children/community

Excluded
- Not willing to participate
  n = 1 community
  Ineligible due to census inaccuracies identified post-inclusion
  N = 20 communities

Randomly selected for index test (birth history)
  n = 16 communities
  Mean 248 ± 188 children/community

Completed index test and included in analysis
  n = 16 communities
  Mean 293 ± 198 children/community

*Summaries of children and households per community are shown for the total included over the 5 years study.
